

# SMART SECURITY SOLUTIONS FOR AIRPORTS

Security is absolutely critical issue for any international airport of our time. Proven high resistance against all kinds of attacks is a necessary condition of compliance with standards of The International Air Transport Association and other international bodies as well as of creating trust of airlines and passengers.

The key challenges insist in:

- Ensuring high security with reasonable operational costs
- Avoiding inadequate obstruction of ordinary passengers
- Implement security arrangement, which is not dependent on human factor

Integoo is an excellent partner for such challenges. Our skills are reinforced with huge experience in implementing mission critical security solutions. Millions of people in several countries are protected through solutions we developed.

We are familiar with the environment of airports, central train stations and other big transport centers. However, we can also bring experience from other sectors, such as banking and energy.

Partnership with global security technology leaders, such as FLIR Systems, Genetec and Verint, enables us to deliver leading edge products to our clients.

We have succeeded in the Central European market known by advanced clients and an extreme pressure on pricing. However, you can find our solutions on other continents as well.

We also bring proven ability to deliver challenging projects on time and budget.

We are proud of our reputation of a company, which is able to understand specific issues of particular clients, find the right answers to these issues, select the most suitable technology and product, implement it and take responsibility for long term support. We deliver comprehensive solutions including hardware and network infrastructure. But we are flexible enough to develop and implement “just” intelligent core of systems of our partners.

- Intelligent **video surveillance** systems, including video detection and analysis of behavior patterns
- **Perimeter surveillance radars**
- **Biometry solutions** (face recognition, fingerprints, iris identification etc.)
- **Integration** of heterogeneous security technologies into a seamless unit with single interface
- **Persistent surveillance automation** to ensure both protection against human error and low operational costs.

**BENEFIT FROM OUR COMBINATION OF TECHNOLOGICAL EXCELLENCE AND DEEP UNDERSTANDING TO SECURITY ISSUES!**
